GGBase: infrastructure for genetics of gene expression

VJ Carey

April 14, 2011

1 Introduction

Data representations for genetics of gene expression in humans must be as efficient as possible. Up to Bioconductor 2.1, integrative genomics experiments could be represented by racExSet instances as defined in package GGtools. Genotypes were represented as integers.

For Bioconductor 2.8, we have access to the snpStats package of D. Clayton, and we have introduced the smlSet class to represent genetics of gene expression studies with lists of SnpMatrix instances, along with ordinary representations of expression data.

2 Primary class structure, and associated methods

```
> library(GGBase)
> getClass("smlSet")
Class "smlSet" [package "GGBase"]
Slots:
```

Name: smlEnv annotation organism Class: environment character character

Name: assayData phenoData featureData Class: AssayData AnnotatedDataFrame AnnotatedDataFrame

Name: experimentData protocolData .__classVersion__ Class: MIAxE AnnotatedDataFrame Versions

Extends:

Class "eSet", directly

```
Class "VersionedBiobase", by class "eSet", distance 2
Class "Versioned", by class "eSet", distance 3
> showMethods(class = "smlSet", where = "package:GGBase")
Function: [ (package base)
x="smlSet", i="ANY", j="ANY", drop="ANY"
Function: coerce (package methods)
from="smlSet", to="ExpressionSet"
Function: combine (package Biobase)
x="smlSet", y="smlSet"
Function: exprs (package Biobase)
object="smlSet"
Function: getAlleles (package GGBase)
x="smlSet", rs="rsid"
Function: plot_EvG2 (package GGBase)
gsym="genesym", rsid1="rsid", rsid2="rsid", sms="smlSet"
gsym="probeId", rsid1="rsid", rsid2="rsid", sms="smlSet"
Function: plot_EvG (package GGBase)
gsym="genesym", rsid="rsid", sms="smlSet"
gsym="probeId", rsid="rsid", sms="smlSet"
Function: show (package methods)
object="smlSet"
Function: smList (package GGBase)
x="smlSet"
Function: smlEnv (package GGBase)
x="smlSet"
Function: snpNames (package GGBase)
x="smlSet", c="chrnum"
x="smlSet", c="missing"
Function: snps (package GGBase)
x="smlSet", chr="chrnum"
```

```
Function: updateObject (package Biobase)
object="smlSet"
```

3 Example data structure

```
> data(smlSet.example)
> smlSet.example

SnpMatrix-based genotype set:
number of samples: 10
number of chromosomes present: 1
annotation: illuminaHumanv1.db
Expression data dims: 100 x 10
Phenodata: An object of class "AnnotatedDataFrame"
   sampleNames: NAO6985 NAO6991 ... NAO7048 (10 total)
   varLabels: famid persid ... male (7 total)
   varMetadata: labelDescription
```

4 SNP location infrastructure

see the newSNPloc vignette

5 Conclusion

The concepts discussed above define the bulk of the tools supporting the gwSnpTests method of GGtools. Consult the vignette of GGtools for more information.
