

BACTERIAL TRANSCRIPTION

EMBL 2010

Bioconductor Developer Meeting

Leonardo Collado Torres

Winter Genomics

OUTLINE

- ▶ Background information
 - ▶ Work team
 - ▶ Developer team
 - ▶ Biology
 - ▶ Goals
 - ▶ Our work dynamic
 - ▶ What we've done
 - ▶ To do list
- 

A DIVERSE WORK TEAM

- ▶ A benchwork lab (Morett's at iBT UNAM)
 - ▶ Developer of new transcription start sites mapping techniques and maintainer of the UUSMD (local seq. facility)
- ▶ A bioinformatics lab (Collado-Vides's at CCG UNAM)
 - ▶ Transcriptional bacterial regulation and maintainer of RegulonDB
- ▶ A new bioinformatics company (Winter Genomics)
 - ▶ New high throughput sequencing bioinformatics service company
- ▶ Undergraduate Program on Genomic Sciences (LCG) UNAM
 - ▶ All of the developers come from this program (graduated and current students)

DYNAMIC DEVELOPER TEAM

▶ April – June 2010

- ▶ (5th) Alejandro Reyes Quiroz
- ▶ (5th) Victor Moreno Mayar
- ▶ (5th) Gabriel Cuellar Partida

▶ Other programmers

- ▶ Veronica Jimenez Jacinto
- ▶ Leticia Vega Alvarado
- ▶ Blanca Taboada

▶ Aug 2010 – currently

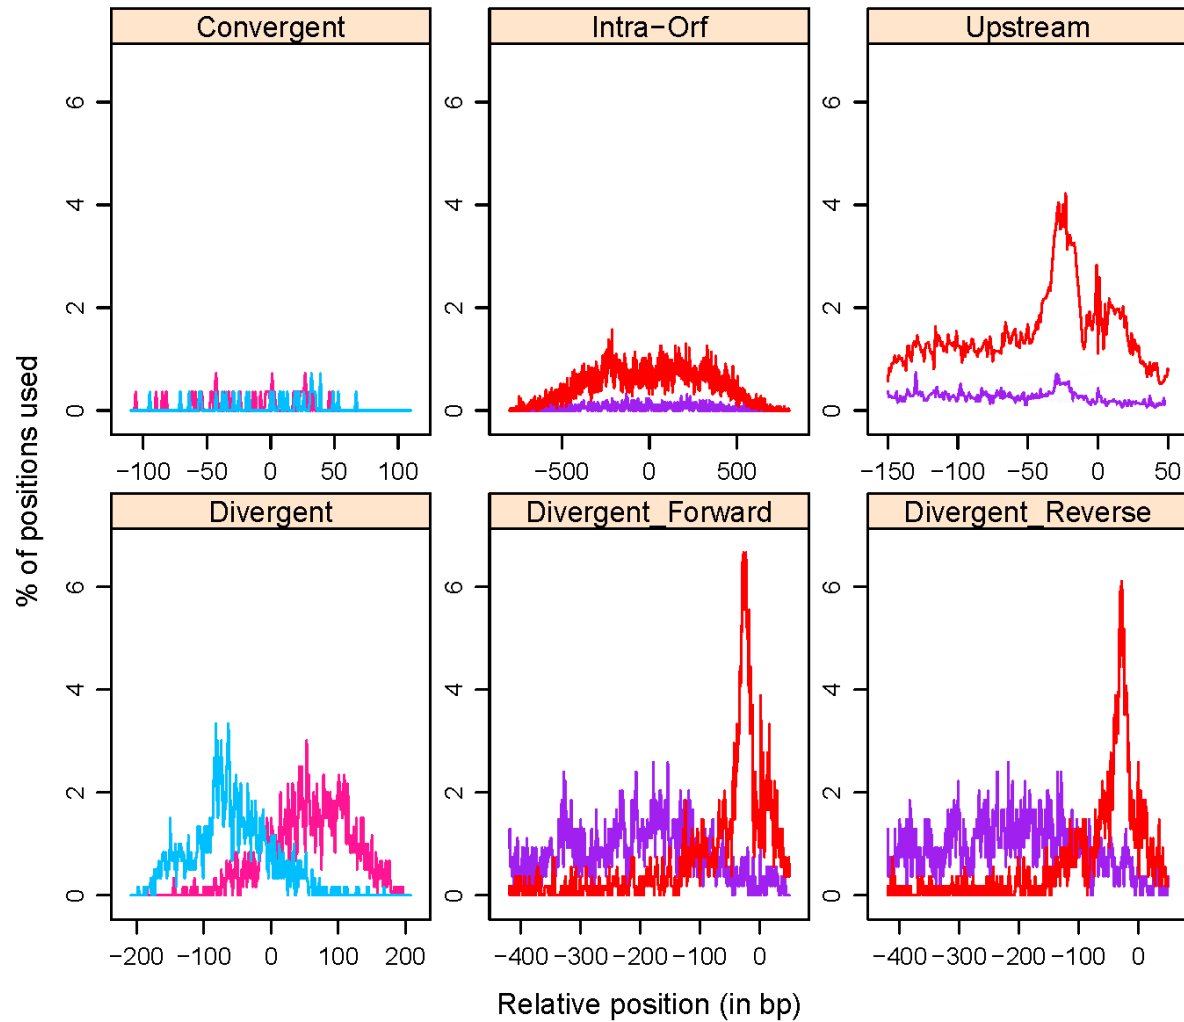

- ▶ (3rd) Carlos Vargas Chavez
- ▶ (6th) Melvin Noe Gonzalez
- ▶ (6th) Mayela Soto
- ▶ (6th) Daniela Garcia Sorano

BIOLOGY

- ▶ Understand the transcriptional landscape at the genomic level
- ▶ Transcription Start Sites (TSSs)
 - ▶ Sites where the mRNA begins its transcription
 - ▶ Identify all active TSSs in a given condition
 - ▶ Unexpectedly high variability!
- ▶ Transcription Units (TUs)
 - ▶ One or multiple genes transcribed in the mRNA
 - ▶ Overlapping genes lead to complex cases!
- ▶ TSSs vs TUs correspondence

TSSgrams for different regulatory frontiers (Adapt 1)

Forward ○
Reverse ○
Antisense ○
Sense ○

TSSs Overlaps in E. coli

Y axis: Number of Unique Positions

TSSs Overlaps in E. coli

Y axis: Number of Reads

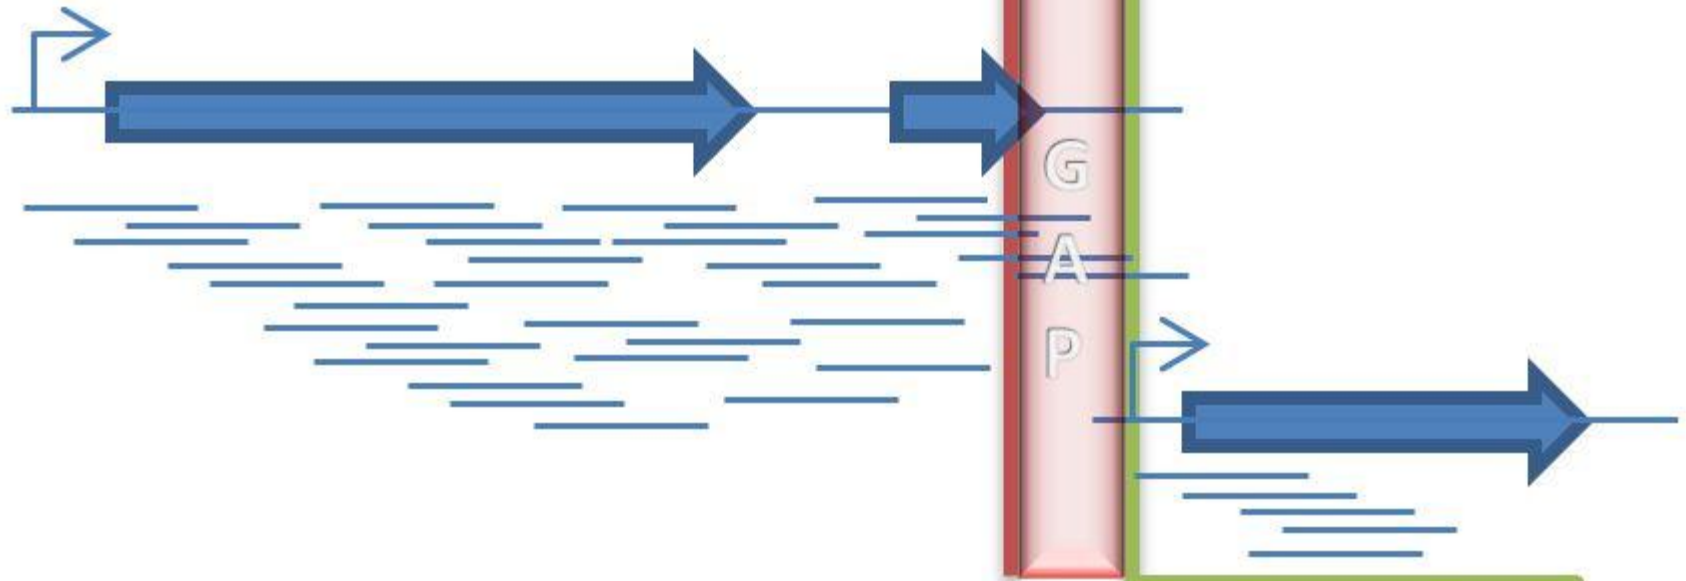

Inf. por gen
 Condition: MM_37_0.5_operon
 Mean: 246.3
 Median: 227.0
 Standard deviation: 62.5
 Max: 363
 Min: 149

Inf. por gen
 Condition: MM_37_0.5_operon
 Mean: 147.2
 Median: 145.0
 Standard deviation: 33.2
 Max: 243
 Min: 55

Last possible
initial position of
read in TU 1

First possible
initial position of
read in TU 2

Heads-Tails TU Example

Fragment from 2595812 to 2599023

PROJECT GOALS

- ▶ Guarantee reproducibility
- ▶ Complete proposal on how to analyze this kind of data
 - ▶ Including working software!
- ▶ Facilitate future similar analyses from other bacteria
- ▶ Create easy (straight forward) to use software

- ▶ Learn more about BioC

WHAT WE'VE DONE SO FAR

- ▶ A pile of ideas 😊
- ▶ Most of the code for the TSSs is ready
 - ▶ GRanges
 - ▶ List (up to 3) of SimpleRleList
- ▶ Prototypes for the 3 TU methods
- ▶ Summary information
 - ▶ GRanges // data.frame
 - ▶ Plots mostly using lattice
- ▶ Trained undergrads in R / BioC ^_^

TO DO

- ▶ Define how to evaluate the TU methods
- ▶ Evaluate them
- ▶ DOCUMENTATION!
- ▶ Feedback on objects that would be less prone to being broken by users
- ▶ Check the SummarizedExperiment class
- ▶ Aim: getting done prior to the next release
