

# Package ‘dsQTL’

October 4, 2014

**Title** dsQTL, data excerpt from Degner et al. 2012 Nature letter

**Version** 0.2.0

**Author** VJ Carey <stvjc@channing.harvard.edu>

**Description** dsQTL, excerpt from Degner et al. 2012 Nature letter on DNA variants associated with DnaseI hypersensitivity

**Suggests**

**Depends** R (>= 2.15.0), utils, GenomicRanges, Biobase, GGBase

**Maintainer** VJ Carey <stvjc@channing.harvard.edu>

**License** Artistic-2.0

**LazyLoad** yes

**biocViews** genetics, HighThroughputSequencingData, ExperimentData

## Description

dsQTL, excerpt (and complete image, added March 2013) from Degner et al. 2012 Nature letter on DNA variants associated with DnaseI hypersensitivity

**Details**

```

Package:    dsQTL
Version:    0.0.26
Suggests:
Depends:    R (>= 2.15.0), utils, GenomicRanges, Biobase, GGBase
License:    Artistic-2.0
LazyLoad:  yes
biocViews: genetics, HighThroughputSequencingData, ExperimentData
Packaged:   2014-02-01 17:21:58 UTC; biocbuild
Built:      R 3.1.0; ; 2014-02-13 03:35:19 UTC; unix

```

This package has two main components. First, a selection of genotype and DNase-seq data for illustration of dsQTL identification. Second, a complete image of the filtered DHS assay results is available in SummarizedExperiment.

The slide deck for the Feb 2012 Seattle Bioconductor workshop has illustrations.

A utility function SE2ES will create an ExpressionSet instance from a SummarizedExperiment as serialized here.

**Author(s)**

VJ Carey <stvjc@channing.harvard.edu>

Maintainer: VJ Carey <stvjc@channing.harvard.edu>

**References**

PMID 22307276

**Examples**

```

#
# this chunk illustrates how to use a cluster to iterate cis-association
# testing, with 1000G VCF as the genotype source. doChr sets up a
# request for chunked iteration over DHS sites in one chromosome
# upon completion a single GRanges is saved to disk
#
## Not run:
library(BatchJobs)
library(GGtools)
library(dsQTL)
data(DHStop5_hg19)

doChr = function(ctag="chr5") {
  regobn = paste0("reg", ctag)
  idtag = paste0("run", ctag)
  assign(regobn, makeRegistry( id = idtag, seed=123, file.dir=paste0("run", ctag, "dir"),
    packages=c("Rsamtools", "VariantAnnotation", "rtracklayer",
      "GGtools", "dsQTL")))

```

```
cfun = function(chrtag) function(inds) {
  vcfpath = function(chrn="chr9") {
    patt = "[YOUR PATH TO 1000Genomes_Phase1_v3/ALL HERE]/ALL."
    sub("
  }
  if (!exists("DHStop5_hg19")) data(DHStop5_hg19)
  c1.tf = TabixFile(vcfpath(chrtag))
  cisAssoc( DHStop5_hg19[inds,], vcf.tf=c1.tf, rhs=~1, cisradius=1000,
    stx=force, vtx=force, snfilt=function(x) gsub("chr", "", x),
    genome="hg19", assayind=1 )
}

inds2 = which(seqnames(DHStop5_hg19)==ctag)
