`graphBPH` *Constructor for graphBPH objects*

Description

A convenience constructor for `graphBPH-class` objects. This is a generic function.

Usage

```
graphBPH(graph, edgeNodePattern, ...)
```

Arguments

graph	Some form of graph that is to be converted into a graphBPH object.
edgeNodePattern	A regular expression used to distinguish between normal nodes and edge nodes.
...	Potential arguments to other methods.

Value

An object of class graphBPH-class

Methods

graphBPH signature(graph = "graphNEL", edgeNodePattern = "character"): create a graphBPH object from a (directed) graphNEL object.

graphBPH signature(graph = "Hypergraph", edgeNodePattern = "missing"): create a graphBPH object from a Hypergraph object (where all Hyperedges are DirectedHyperedges).

Author(s)

Paul Murrell

---

graphBPH-class *Class "graphBPH"*

Description

A bipartite representation of a hypergraph. The purpose of this class is to support visualization of the hypergraph; it is not intended for analysis or manipulation of the hypergraph.

Objects from the Class

Objects can be created by calls of the form new("graphBPH", graph, edgeNodePattern, ...). There is also a convenience function graphBPH().

A graphBPH object consists of a graphNEL object, which must obey some strict rules:

- nodes in the graph are divided into two sets: normal nodes and edge-nodes,
- all edges in the graph must connect a normal node to an edge node,
- the graph must be a directed graph.

The edgeNodePattern is a regular expression that is used to define the set of edge-nodes.

Slots

`graph`: Object of class `graphNEL`. This graph must obey the constraints described above.

`edgeNodePattern`: Object of class `character`. The regular expression used to define edge-nodes.

`nodes`: Object of class `character`. Records which nodes in the graph are normal nodes.

`edgeNodes`: Object of class `character`. Records which nodes in the graph are edge-nodes.

`edgeNodeIO`: Object of class `list`. Records information about which edges enter and exit each edge-node.

Methods

plot `signature(x = "graphBPH", y = "ANY")`: draw a representation of the hypergraph where edges between normal nodes in the graph pass through an intermediate edge-node in a nice smooth curve.

graphLayout `signature(graph = "graphBPH", layoutType = "missing")`: convert the `graphBPH` object to a `RagraphBPH` object (using a default layout method).

graphLayout `signature(graph = "graphBPH", layoutType = "character")`: convert the `graphBPH` object to a `RagraphBPH` object (using the specified layout method).

Examples

```
nodes <- c(LETTERS[1:5], paste("R", 1:3, sep=""))
testgnel <- new("graphNEL",
                nodes=nodes,
                edgeL=list(
                  A=list(edges=c("R1", "R2")),
                  B=list(edges="R2"),
                  C=list(),
                  D=list(edges="R3"),
                  E=list(),
                  R1=list(edges="B"),
                  R2=list(edges=c("C", "D")),
                  R3=list(edges="E")),
                edgemode="directed")
testbph <- graphBPH(testgnel, "^R")
plot(testbph)
```

```
# A Hypergraph equivalent
require(hypergraph)
dh1 <- DirectedHyperedge("A", "B", "R1")
dh2 <- DirectedHyperedge(c("A", "B"), c("C", "D"), "R2")
dh3 <- DirectedHyperedge("D", "E", "R3")
hg <- Hypergraph(LETTERS[1:5], list(dh1, dh2, dh3))
plot(graphBPH(hg))
```

---

graphLayout *Layout a graph.*

Description

This function is designed to layout a graph using the **Rgraphviz** package. The **hyperdraw** package makes this a generic function with a method for graphBPH objects. The function of the same name in the **Rgraphviz** package is used as a method for Ragraph objects.

Usage

```
graphLayout(graph, layoutType, ...)
```

Arguments

graph	An graphBPH object, which is to be laid out.
layoutType	The layout method (e.g., dot or neato).
...	These arguments will be passed to the agopen() function.

Value

An RagraphBPH object.

testgnel <- new("graphNEL",
                nodes=nodes,
                edgeL=list(
                  A=list(edges=c("R1", "R2")),
                  B=list(edges="R2"),
                  C=list(),
                  D=list(edges="R3"),
                  E=list(),
                  R1=list(edges="B"),
                  R2=list(edges=c("C", "D")),
                  R3=list(edges="E")),
                edgemode="directed")
testbph <- new("graphBPH", testgnel, "^R")
testrabph <- graphLayout(testbph)
```

RagraphBPH-class *Class "RagraphBPH"*

Description

The purpose of this class is to represent a laid out version of a graphBPH object. The laying out is performed by the **Rgraphviz** package. This is an intermediate step in the process of drawing a graphBPH object.

Objects from the Class

Objects of this class should be created via the graphLayout() function.

Slots

graph: Object of class Ragraph. The laid out graph.

allNodes: Object of class character. The names of all nodes in the graph.

nodes: Object of class character. Records normal nodes in the graph.

edgeNodes: Object of class character. Records edge-nodes in the graph.

edgeNodeIO: Object of class list. Records which edges enter and exit each edge-node.

Methods

plot signature(x = "RagraphBPH", y = "ANY"): draw a representation of the hypergraph where edges between normal nodes in the graph pass through an intermediate edge-node in a nice smooth curve.

edgeDataDefaults<- signature(self = "RagraphBPH", attr = "character", value = "ANY"): set the default drawing attributes for all edges.

edgeData<- signature(self = "RagraphBPH", from = "character", to = "character", attr = "chara
set a specific drawing attribute for one or more edges.

nodeDataDefaults<- signature(self = "RagraphBPH", attr = "character", value = "ANY"): set the default drawing attributes for all nodes.

nodeData<- `signature(self = "RagraphBPH", n = "character", attr = "character", value = "ANY")`
set a specific attribute for one or more nodes.

graphDataDefaults<- `signature(self = "RagraphBPH", attr = "character", value = "ANY")`:
set the default drawing attributes for the graph.

graphData<- `signature(self = "RagraphBPH", n = "character", attr = "character", value = "ANY")`
set a specific attribute for the graph.
