A scatter plot on a grid. The grid has a solid vertical line at the center and two dashed horizontal lines. A blue rectangular region is located in the lower half of the plot, spanning from the left edge to the center vertical line and from the bottom edge to the first dashed horizontal line. A horizontal black line is drawn across the blue region at approximately one-third of the way up from the bottom. There are 20 black dots scattered across the plot. 12 dots are located within the blue rectangular region, and 8 dots are located outside it. The dots are distributed as follows: 4 on the left edge of the blue region, 4 on the bottom edge, 2 on the right edge, and 2 in the interior of the blue region. Outside the blue region, there are 2 dots on the left, 1 dot on the right, and 5 dots in the upper half of the plot.
