Package 'msgbsR'

April 16, 2019

Type Package
Title msgbsR: methylation sensitive genotyping by sequencing (MS-GBS) R functions
Version 1.6.1
Date 2017-04-24
Author Benjamin Mayne
Maintainer Benjamin Mayne
Depends R (>= 3.4), GenomicRanges, methods
Imports BSgenome, easyRNASeq, edgeR, GenomicAlignments, GenomicFeatures, GenomeInfoDb, ggbio, ggplot2, IRanges, parallel, plyr, Rsamtools, R.utils, stats, SummarizedExperiment, S4Vectors, utils
Suggests roxygen2, BSgenome.Rnorvegicus.UCSC.rn6
biocViews ImmunoOncology, DifferentialMethylation, DataImport, Epigenetics, MethylSeq
Description Pipeline for the analysis of a MS-GBS experiment.
License GPL-2
LazyLoad yes
Collate 'msgbsR.R' 'rawCounts.R' 'checkCuts.R' 'plotCounts.R' 'diffMeth.R' 'plotCircos.R'
RoxygenNote 5.0.1
git_url https://git.bioconductor.org/packages/msgbsR
git_branch RELEASE_3_8
git_last_commit 411f316
git_last_commit_date 2019-01-04
Date/Publication 2019-04-15

checkCuts

checkCuts

Description

Determines the sequence around a cut site using a fasta file or BSgenome

Usage

```
checkCuts(cutSites, genome, fasta = FALSE, seq)
```

Arguments

cutSites	A GRanges object containing the locations of the cut sites to be checked for sequence match. The names of the correct cut sites will be returned as a GRanges object.
genome	The path to a fasta file or a BSgenome object to check for genomic sequences.
fasta	TRUE if a fasta file has been supplied. Default = FALSE
seq	The desired recognition sequence that the enzyme should have cut.

Value

A GRanges object containing the names of the sites that had the correct sequence.

Author(s)

Benjamin Mayne

Examples

cuts 3

cuts	A GRanges object of differentially methylated MspI cut sites on chro-
	mosome 20 in Rat from a MS-GBS experiment.

Description

The GRanges object was created from a list of differentially methylated cut sites from a MS-GBS experiment between two groups of rats that were fed either a control diet or a high fat diet.

Usage

```
data(cuts)
```

Format

A GRanges object of length 10.

Details

• Positions of MspI cut sites differentially methylated in the prostate on chromosome 20 in Rats. The data set contains 10 differentially methylated sites in the prostate between rats fed a control or high fat diet.

Value

A GRanges object of length 10.

Description

Determines differential methylated sites from a RangedSummarizedExperiment

Usage

Arguments

se	A RangedSummarizedExperiment containing meta data of the samples.					
cateogory	The heading name in the sample data to be tested for differential methylation.					
condition1	The reference group within the cateogory.					
condition2	The experimental group within the cateogory.					
block	The heading name in the sample data if differential methylation is to be tested with a blocking factor. Default is NULL.					
cpmThreshold	Counts per million threshold of read counts to be filtered out of the analysis.					
thresholdSample	thresholdSamples					

Minimum number of samples to contain the counts per million threshold.

4 plotCircos

Value

A data frame containing which cut sites that are differenitally methylated.

Author(s)

Benjamin Mayne

Examples

msgbsR

msgbsR

Description

msgbsR

plotCircos

plotCircos

Description

Plot a circos representing the cut site locations

Usage

```
plotCircos(cutSites, seqlengths, cutSite.colour, seqlengths.colour)
```

Arguments

cutSites A GRanges object containing the locations of the cut sites to be plotted. seqlengths An integer with the lengths of the chromosomes.

cutSite.colour The colour of the cut sites.
seqlengths.colour

The colour of the chromosomes

Value

A circos plot showing the locations of the cut sites.

Author(s)

Benjamin Mayne

plotCounts 5

Examples

plotCounts

plotCounts

Description

Plots the total number of reads vs total number of cut sites per sample

Usage

```
plotCounts(se, cateogory)
```

Arguments

se A RangedSummarizedExperiment containing meta data of the samples.

cateogory The heading name in the sample data to distinguish groups.

Value

Produces a plot showing the total number reads vs total number of cut sites per sample.

Author(s)

Benjamin Mayne

Examples

```
data(ratdata2)
plotCounts(se = ratdata2, cateogory = "Group")
```

ratdata

Read counts of potential MspI cut sites from a MS-GBS experiment of prostates from rats

Description

A RangedSummarizedExperiment containing read counts generated from a MS-GBS experiment using the restriction enzyme MspI, focusing on chromosome 20 of Rat.

Usage

```
data(ratdata)
```

6 ratdata2

Format

RangedSummarizedExperiment

Details

• ratdata A RangedSummarizedExperiment with 16047 potential MspI cut sites on chromosome 20 in Rat and six samples (3 Control and 3 Experimental).

This dataset contains six prostate samples from rats: 3 control and 3 experimental high fat diet.

Value

RangedSummarizedExperiment

ratdata2	Read counts of correct MspI cut sites from a MS-GBS experiment of
	prostates from rats

Description

A RangedSummarizedExperiment containing read counts generated from a MS-GBS experiment using the restriction enzyme MspI, focusing on chromosome 20 of Rat. The sites have been checked for the correct recognition site.

Usage

data(ratdata2)

Format

Ranged Summarized Experiment

Details

• ratdata2 A RangedSummarizedExperiment containing data for 13983 MspI cut sites on chromosome 20 in Rat and six samples (3 Control and 3 Experimental).

This dataset contains six prostate samples from rats: 3 control and 3 experimental high fat diet. The data can be used for differential methylation analyses.

Value

RangedSummarizedExperiment

rawCounts 7

Description

Imports the raw read counts from sorted and indexed bam file(s)

Usage

```
rawCounts(bamFilepath, threads = 1)
```

Arguments

bamFilepath The path to the location of the bam file(s).

threads The total number of usable threads to be used. Default is 1.

Value

Produces a RangedSummarizedExperiment. Columns are samples and the rows are cut sites. The cut site IDs are in the format chr:position-position:strand.

Author(s)

Benjamin Mayne, Sam Buckberry

Examples

```
my_path <- system.file("extdata", package = "msgbsR")
my_data <- rawCounts(bamFilepath = my_path)</pre>
